

## Adjust Playback Speed

[00:00:00]

Changing the playback speed of the video is an easy way to adjust the speed of the video during the clip creation process.

[00:00:08]

Changing the playback speed of the video does not impact the actual speed of the clip you are creating.

[00:00:14]

This can help you create more clips faster.

[00:00:17]

Start by hovering over the control that says speed.

[00:00:22]

This will display all of the playback speed options.

[00:00:25]

If you select 2X and then click play, this will change the video to playback double the speed.

[00:00:41]

Adjusting the speed to .25 X will slow down the playback speed of the video.
