

Export Processed Clips

[00:00:05]

Let's say you have created a couple of clips and you just want to post those clips on social media.

[00:00:11]

We have created a really easy way to export clips while you are still in the clip creator, it is important to know you can only export processed clips out of the clip creator.

[00:00:21]

So make sure you process any clippings you want before exporting.

[00:00:26]

Above the clip side panel, there is an orange export process clips button. When you click that button, it will pull up this Finder window where you can choose a location on your machine where you want these video files saved. These new MP4 files can be used wherever you want.

[00:00:47]

These clips still exist within clip Smash, so you can go back to your my clips library to see them or use them within the smash builder.
