

Process Clips Now

[00:00:00]

To get started, it is helpful to know we never alter your videos.

[00:00:04]

The clip creator will create shorter pieces of your video, but your original video will stay intact during the clipping process, you will marking the clips you want to make, but you can't use them outside of the clip creator until they are processed within the clip creator.

[00:00:19]

You may see these clippings in an unprocessed state the processing.

[00:00:24]

Essentially makes this clipping a new video that you can either use in the Smash folder or export it directly to your machine.

[00:00:32]

The processing time will depend on the length of the clip you are making.

[00:00:36]

When we were designing clip Smash, we found that some people wanted to process immediately, so every clip was ready to go and some wanted to make all of their clippings at once and then do the processing in a batch.

[00:00:47]

So we built both options when creating your first clip in the clip creator.

[00:00:52]

You will be asked which way you want to process for this session, but if you exit clip creator and reopen it, you will be asked to choose again.

[00:00:59]

So it is easy to change your mind.

[00:01:02]

Let's start by looking at processing now.

[00:01:05]

Again, this is helpful when you just want to create one clip or a couple of short clips from a video.

[00:01:11]

If you watched the creating a clip video, you'll remember the processing choice appears when you are saving your first clip in a session.

[00:01:24]

Let's select process now and then click save.

[00:01:27]

This clip starts processing immediately.

[00:01:38]

When it is done, you'll see the success message and you can go Back to the clip creator.

[00:01:42]

Now you can see that clip is in the processed state.

[00:01:45]

The visual representation of a processed clip is this green indicator

[00:01:50]

You can no longer modify this clip in the clip creator you can export, rename, or delete it, but you can't change the length of the clip in the clip creator.

[00:02:00]

We'll talk more about trimming a clip in the Smash builder video.

[00:02:05]

If you closeout of the clip creator and go back to my Clips you'll see that the processed clipping is now a full clip in your my clips library.
